

Round containers

FOR THE FOOD INDUSTRY

from 35 to 300 L

Round, stable containers to store liquids and loose material. Due to their conical shape, the empty containers are stackable which makes it possible to save storage space. Smooth inner walls allow easy and quick cleaning. The pails are made from HDPE. It is possible to use them in temperatures from -30 to +60 degrees. They are used in many industries, e.g. in the bakery industry.
